Education

York University Toronto, ON
B.Sc.(Hons.) Computer Science *Jan 2023-May 2027*

Experience

AI Engineer, Co-op Toronto, ON
Ontario Government, Ministry of Public and Business Service Delivery & Procurement *May 2026 - Aug 2026*

- Shipped a production **LLM-powered RAG application** grounding answers in **20** curriculum documents, by building semantic chunking, embeddings, and top-k **vector search** in **Pinecone** with **LangChain**.
- Cut inference latency **35%**, as measured by run-level **observability** logs, by tuning chunk size, caching embeddings, and iterating on prototype quality and reliability.
- Reduced hallucination, as measured by transcript review and failure categorization, by applying **prompt engineering** that constrained generation to retrieved context.

Software Developer Engineer, Co-op Toronto, ON
Ontario Government, Ministry of Public and Business Service Delivery & Procurement *Sept 2025 - May 2026*

- Consolidated **30** datasets from **20** enterprise systems into the data layer behind AI applications, by building **Python** data pipelines and **REST APIs**.
- Cut incident response time **33%**, as measured by time to resolution, by deploying to **AWS** with **Docker** and **CI/CD** and building **monitoring and alerting**.

Co-Founder & Software Developer Toronto, ON
Clarus, AI Workflow Automation Startup *Mar 2026 - Present*

- **Won Hack Canada 2026** and secured startup **funding through NSU Cohort 4**, by co-founding Clarus and shipping an **AI agent** that automates a workflow across **five** enterprise systems.
- Eliminated manual handoffs, reaching **zero** in the automated workflow, by building a **Python agentic architecture** with runtime **tool selection** and conditional branching on **FastAPI**.
- Made **100%** of agent actions auditable for reliability review, by extracting structured data from unstructured documents and instrumenting per-run **audit trails**.

Projects

Numen, GenAI Genesis 2026 | *Python, FastAPI, Gemini, vector search, Next.js* Mar 2026

- Reached a **60%+ auto-answer rate**, removing the majority of questions from expert queues, by building a **multi-agent** platform where **Gemini** embeds, classifies, and answers.
- Delivered near-instant answers across **two** knowledge sources, by implementing **hybrid search** over indexed pull requests and a **768-dimension** embedding knowledge graph.
- Kept low-confidence answers away from users across **three** confidence tiers, by building **evaluation gating** that escalates uncertain questions to experts with pre-packaged context.

Mimicoo, HackTheValley 2025 **(Winner)** | *Python, machine learning, FastAPI, Gemini* Oct 2025

- Validated a classifier to **85%** accuracy and improved inference efficiency **30%**, by engineering features, training the model, and serving it from a **Python** inference API.

Technical Skills

AI & LLM: Generative AI, **LLMs**, **RAG**, **AI agents**, **agentic architectures**, **tool use**, **prompt engineering**, **evaluation frameworks**, LangChain, emerging AI tooling
Vector databases: Pinecone, pgvector, embeddings, semantic & hybrid search; PostgreSQL, MongoDB, Redis, SQL
Software engineering: Python, **TypeScript**, building applications & **APIs**, FastAPI, React, Next.js, Node.js, Java, C#, testing, Git
Cloud & deployment: AWS cloud platform, Docker, Kubernetes, CI/CD, monitoring & **observability**, deploying AI applications at enterprise scale
